 AB - PURPOSE: To enable an owner of software to grasp the using status
 of the software by processing the stored contents of a history
 storing means of the using software in accordance with the
 inherent data of the software.
 CONSTITUTION: The software owner P offers an onerous software PP
 including software inherent data Pi. When a request for using the
 software PP is generated in a user's data processing system DPS,
 a usable/disusable checking means CHECK checks the possibility
 for use of the specified software on the basis of user's inherent
 data USERID. When the use is O.K.'s, the message is information
 to an operating system of the system DPS and the data USERID and
 Pi are stored in the software history storing means SH. The
 contents of the means SH can be recognized by the owner P and a
 software rate can be found out for every software owner on the
 basis of the contents of the means SH.
